

## International New Universal Primer Range

**Intershield 300 in a ballast tank after 13 years in service.**

**Intergard 7600 after 6 months in a cargo hold.**

A new range of universal primers for the newbuilding market is being introduced by International Paint to address the productivity, regulatory, performance and commercial needs of shipyards and ship owners. Leading the range is Intershield 300, which has a 21-year track record on more than 9000 vessels. New Intershield 300HS, is a high solids version, which offers 78% volume solids, lower VOC and application direct from the

can without thinning. Aluminum content is maintained at >9%. It will be available worldwide in mid 2010.

Intergard 7600 is a new, light-colored, pure epoxy universal primer providing good abrasion resistance. It offers low temperature workability and long-term overcoating intervals with no requirement for surface roughening. Currently available in EMEA and ISEAC.

Intergard 787 is a high, 80% volume solids light-colored aluminum pure epoxy coating with good corrosion

protection and abrasion resistance, which is designed to help meet the environmental challenge on VOC emissions. Intergard 5600 and Intergard 5620 complete the range.

These light-colored, epoxy universal primers have evolved from Intergard 403 and Intergard 423 technology. These products reportedly have excellent sprayability all year round.
