MACK BORING OFFERING REPORTS FOR YANMAR CUSTOMERS

Mack Boring & Parts Company, Union, N.J., is offering its Yanmar diesel engine customers free Yanmar performance reports.

The easy-to-read reports cover both the vessel and engine specifications. The reports chart the vessels speed and the amount of fuel burned as rev/min increases.

Intersleek 900 continues to save fuel, time and money

Taiwan's Yang Ming Marine Transport Corporation considers environmental protection a top priority. The company's policy includes complying with domestic environmental regulation and international convention in order to prevent pollution.

It should then be no surprise that Yang Ming has upgraded and coated two new-building projects with the Intersleek 900 foul release system. Intersleek 900 has been proven to reduce fuel consumption and emissions by six percent, and the foul release system contains zero biocides.

The first vessel to be coated was the *YM Utility*. The 8,240 TEU container vessel is Yang Ming's largest vessel at 90,507 GT. The *YM Utility* is also the first vessel to be coated with Intersleek 900 outside of a European yard.

The *YM Utility* at sea

The second vessel coated was the 8,200 TEU container vessel *YM Uniform*, which has already been delivered.
