

PSPC type approval

International Paint's

abrasion resistant, aluminium
pure epoxy coating

Intershield® 300 has received
the first Lloyd's Register IMO
PSPC (Performance Standard
for Protective Coatings) Type
Approval Certificate. The
certification process is
designed to ensure that all

coatings manufactured for use in dedicated seawater ballast tanks, in
all ships and double side skin spaces of bulk carriers, meet strict
performance requirements.

To comply, coatings must pass laboratory tests or inspections to
confirm that the coating has provided at least five years 'Good' in-
service performance or that the coating has existing B1 Marintek
approval. Additionally, the coatings manufacturer must meet the
approved supplier criteria for each supply location.
